through R5	limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup..
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	BGP Minimum Route Advertisement. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R15 through R16)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 119: 7450 ESS 6.1 R14

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
through R8	limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	[576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [576527] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths. **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	IGMP Snooping Maximum Number of Sources. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R14)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 120: 7450 ESS 6.1 R13

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	BGP Minimum Route Advertisement. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Card PChip CAM Statistics and Trap.** 5620 SAM does not support IOM, IMM and SF/CPM Card PChip content addressable memory (CAM) event statisitics and trap. [576526] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R13)
	5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 121: 7450 ESS 6.1 R12

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	Blackhole Ingress Switch Fabric Multicast Path Type. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490]

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	ARP On DHCP Response Packets. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	RADIUS Server Access Algorithm. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R12)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 122: 7450 ESS 6.1 R11

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
through R2	limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R11)
	Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 123: 7450 ESS 6.1 R9 through R10

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	[559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES L3 Access Interfaces. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R9 through R10)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 124: 7450 ESS 6.1 R7 through R8

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	RADIUS Server Access Algorithm. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	Untagged RNCV Support for MC-Ring QinQ SAP. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R7 through R8)
	P-chip Memory Parity Error Alarm. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 125: 7450 ESS 6.1 R6

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R6)
	untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 126: 7450 ESS 6.1 R5

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R5)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 127: 7450 ESS 6.1 R4

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R4)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R4)
	the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R4)
	such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R4)
	SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **MAF and CPM Filter MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) and CPM Filter MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R4)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 128: 7450 ESS 6.1 R3

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R3)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R3)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R3)
	the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 129: 7450 ESS 6.1 R1 through R2

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R1 through R2)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R1 through R2)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.1 R1 through R2)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Alcatel-Lucent 7450 Ethernet Service Switch Release 6.0

Table 130: 7450 ESS 6.0 R18 through R19

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card ‘Last Bootup Reason’: powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R5	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	(PTS 592021) Obsoleted OAM Test History Tables Parameter. 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	802.3ah OAM Loop Cleared Notification. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361]

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address. 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	(PTS 550389) OAM ICMP Trace Test Deployment Failure. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592021) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [592021] **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	tmnxSyncFailureReason. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R18 through R19)
	Service Tunnel Binding Operational Flag 'Out of Resource'. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools).** 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group.** 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC.** 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges.** 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support.** 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support.** 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces.** 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile.** 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces.** 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer.** 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm.** 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override.** 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change.** 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 131: 7450 ESS 6.0 R17

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	BGP Minimum Route Advertisement. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	Transmit XPL Data Error Rate Threshold. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch,

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	Static Route to RSVP-TE. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	limitations: **IOM Card Last Bootup Reason.** 5620 SAM does not support the following new values for an IOM Card 'Last Bootup Reason': powerCycle, clearCard, activitySwitch, configChange, runtimeFail, bootFail, unexpected, issuTimeout, reinserted. [584359] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584361] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R17)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 132: 7450 ESS 6.0 R16

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	Blackhole Ingress Switch Fabric Multicast Path Type. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address. 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	tmnxSyncFailureReason. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R16)
	Service Tunnel Binding Operational Flag 'Out of Resource'. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools).** 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group.** 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC.** 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges.** 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support.** 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support.** 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces.** 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile.** 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces.** 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer.** 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm.** 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override.** 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change.** 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 133: 7450 ESS 6.0 R15

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	Static Route to RSVP-TE. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R15)
	such as start and completion of a recover action after system startup.

Table 134: 7450 ESS 6.0 R13 through R14

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	(PTS 550389) OAM ICMP Trace Test Deployment Failure. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	Static Route to RSVP-TE. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R13 through R14)
	support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 135: 7450 ESS 6.0 R12

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	802.3ah OAM Loop Cleared Notification. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when "send via control plane" is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	P-chip Memory Parity Error Alarm. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	MSTP Support for QinQ L2/L3 Interfaces. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM CPE-Ping Probe Interval With Send Control**. 5620 SAM does not support cpe-ping with a probe interval less than 5 when “send via control plane” is enabled. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R12)
	(PTS 550484) Subscriber Management SLA Profile Queue Override. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 136: 7450 ESS 6.0 R11

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	the value "blackhole" for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP,

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R11)
	synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 137: 7450 ESS 6.0 R10

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	Dynamic Port Buffer Allocation (Named Pools). 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group.** 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC.** 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges.** 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support.** 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support.** 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces.** 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile.** 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces.** 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer.** 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm.** 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override.** 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces.** 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm.** 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances.** 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R10)
	IP-MTU Support for IES Redundant Interfaces. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 138: 7450 ESS 6.0 R9

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R2 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	IEEE 802.1ah Provider Backbone Bridges. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 544714) Unicast / Multicast Import Parameter Deployment failure for OSPFv2 Routing Instance Creation**. Upon creation of a OSPFv2 Routing Instance, a deployment failure will occur due to Unicast / Multicast Import parameters being incorrectly deployed to 7450 ESS. The OSPFv2 routing instance will be created but any parameters configured will need to be redeployed. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R9)
	MSTP Support for QinQ L2/L3 Interfaces. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 139: 7450 ESS 6.0 R7 through R8

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
	the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
	support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
	support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R7 through R8)
	802.3ah OAM Loop Cleared Notification. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 140: 7450 ESS 6.0 R5 through R6

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Blackhole Ingress Switch Fabric Multicast Path Type**. 5620 SAM does not support the value “blackhole” for Ingress Switch Fabric Multicast Path Type. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag ‘Out of Resource’**. 5620 SAM does not support the operational flag ‘Out of Resource’ for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
	L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
	support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R5 through R6)
	Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 141: 7450 ESS 6.0 R4

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R4)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R4)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB).

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R4)
	L2PT Protocol Support. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R4)
	IEEE 802.1ah Provider Backbone Bridges. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Application Assurance**. 5620 SAM does not support Application Assurance and the Application Assurance Integrated Services Adapter (AA-ISA). **BGP Auto Discovery**. 5620 SAM does not support BGP Auto Discovery (BGP AD). **Static Route to RSVP-TE**. 5620 SAM does not support forwarding IP traffic into an RSVP-TE LSP for static routes. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Latest Successful LSP Path MBB and MBB Type**. 5620 SAM does not support latest successful MBB and MBB type for LSP paths. **Service Tunnel Binding Operational Flag 'Out of Resource'**. 5620 SAM does not support the operational flag 'Out of Resource' for Service Tunnel Bindings. **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R4)
	Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 142: 7450 ESS 6.0 R3

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R3)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R3)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R3 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R3)
	Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Dynamic Port Buffer Allocation (Named Pools)**. 5620 SAM does not support Dynamic Port Buffer Allocation (Named Pools). **Secondary LSP Path Shared Risk Loss Group**. 5620 SAM does not support Shared Risk Loss Group (SRLG) for secondary LSP paths. **VLL CAC**. 5620 SAM does not support VLL CAC. **IEEE 802.1ah Provider Backbone Bridges**. 5620 SAM does not support IEEE 802.1ah Provider Backbone Bridges (PBB). **L2PT Protocol Support**. 5620 SAM does not support L2PT protocols CDP, DTP, PAGP, UDLD and VTP for VPLS / I-VPLS services.

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R3)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MSTP Support for QinQ L2/L3 Interfaces**. 5620 SAM does not support MSTP for QinQ L2/L3 Interfaces. **TACACS+/RADIUS Template User Profile**. 5620 SAM does not support default user profile for TACACS+/RADIUS template user. **IP-MTU Support for IES Redundant Interfaces**. 5620 SAM does not support IP-MTU for IES redundant interfaces. **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 143: 7450 ESS 6.0 R2

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R2)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R2)
	invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 535281) 5620 SAM NE-Schedulable/NE-Persistent STM Test Removal**. Upon a full re-synchronization, 7750/7450/7710 6.0 R2 routers may not provide MIB entries on a NE Schedulable or NE Persistent STM test, which may result in 5620 SAM removing tests. Recommendation: Perform manual tests by using regular OAM tests invoked from 5620 SAM. 6.0 R3, and later versions of the router resolve the problem as per the Resolved Issues section of the 7750 SR /7450 ESS /7710 SR 6.0.R3 Software Release Notes. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 144: 7450 ESS 6.0 R1

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R1)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R2 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM

5620 SAM Release	Compatibility Statement (7450 ESS 6.0 R1)
	test octet size range values for MFIB ping (values 1-39). **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Alcatel-Lucent 7450 Ethernet Service Switch Release 5.0

Table 145: 7450 ESS 5.0 R23 through R25

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R4	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
through R8	limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	RADIUS Server Access Algorithm. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	P-chip Memory Parity Error Alarm. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	limitations: **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	Ingress VLAN Swapping. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R23 through R25)
	bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 146: 7450 ESS 5.0 R22

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	P-chip Memory Parity Error Alarm. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Ingress/Egress P-chip Error Rate Threshold. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Ingress VLAN Swapping. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	Transmit XPL Data Error Rate Threshold. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R22)
	compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 147: 7450 ESS 5.0 R21

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
5620 SAM 8.0 R1 and above	Network element not supported.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR).

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	Network Queue Policy CIR/PIR Adaptation Rules. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	(MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 547867) VRRP Configuration Failure for Router / IES Interfaces**. 5620 SAM does not support configuration of VRRP parameters for router interfaces and IES interfaces. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R21)
	Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 148: 7450 ESS 5.0 R16 through R20

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	OAM Forwarding Class Specification. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	Transport Tunnel Unstable Operating Flag. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Ingress/Egress P-chip Error Rate Threshold**. 5620 SAM does not support Ingress/Egress P-chip Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **Transmit XPL Data Error Rate Threshold**. 5620 SAM does not support Transmit XPL Data Error Rate for Cards and Daughtercards, including threshold exceeded alarms. **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	OAM Test Octet Size Range Change. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R16 through R20)
	Unnumbered IP Interfaces on IES. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 149: 7450 ESS 5.0 R15

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	7450 ESS-6v Chassis. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	(PTS 550484) Subscriber Management SLA Profile Queue Override. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	Interface Delay Timers. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG Port Add Failure Cleared Notification**. 5620 SAM does not support the tLagPortAddFailureCleared notification indicating that the condition preventing addition of a port to a LAG has been resolved. **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	Transport Tunnel Unstable Operating Flag. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R15)
	Account configuration.

Table 150: 7450 ESS 5.0 R14

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	GigE Daughtercard Field Replacement Alarms. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	Transport Tunnel Unstable Operating Flag. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 ESS-6v Chassis**. 5620 SAM does not support the 7450 ESS-6v chassis. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R14)
	(MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 151: 7450 ESS 5.0 R13

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	Service Tunnel 'Labels Exhausted' State Cause. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	Flow Controlled MPLS/LSP Failure State. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR).

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	Multicast CAC Extended Support for LAGs. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	MD5 Authentication of RSVP Interface. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R13)
	description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 152: 7450 ESS 5.0 R12

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	Service Tunnel 'Labels Exhausted' State Cause. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	Service Tunnel 'Labels Exhausted' State Cause. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	MCS Extension to Maintain MVR State. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R12)
	ports. **RADIUS Template User Account.** 5620 SAM does not support RADIUS Template User Account configuration.

Table 153: 7450 ESS 5.0 R10 through R11

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	Ingress VLAN Swapping. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
through R4	limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	Transport Tunnel Unstable Operating Flag. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	OAM Test Octet Size Range Change. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Flow Controlled MPLS/LSP Failure State**. 5620 SAM does not support the TmnxMplsLspFailCode 'lspFlowControlled (23)' reason for LSP Path and LSP Crossconnect failure. **Service Tunnel 'Labels Exhausted' State Cause**. 5620 SAM does not support the operational state cause "Label Manager has run out of labels" for Service Tunnels. **Subscriber Authentication Policy 'User Name Format'**. 5620 SAM does not support the ASCII-Converted Circuit-ID or ASCII-Converted Both (Tuple) settings for 'User Name Format' under Subscriber Authentication Policies. **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R10 through R11)
	Unnumbered IP Interfaces on IES. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 154: 7450 ESS 5.0 R8 through R9

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
	VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
	Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
	Transport Tunnel Unstable Operating Flag. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
	OAM Test Octet Size Range Change. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Ingress VLAN Translation**. 5620 SAM does not support Ingress VLAN Translation for VLL (E-PIPE) and VPLS on Dot1Q encapsulated L2 Interfaces and Service Tunnel bindings. **Ingress VLAN Swapping**. 5620 SAM does not support Ingress VLAN Swapping for VLL (E-PIPE) and VPLS on QinQ encapsulated L2 Interfaces and Service Tunnel bindings. **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R8 through R9)
	Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 155: 7450 ESS 5.0 R5 through R7

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
	specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
	MPLS Instance Down Reason. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
	Daughtercard with a non-Rev. B Daughtercard. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
	ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **MD5 Authentication of RSVP Interface**. 5620 SAM does not support MD5 Authentication of RSVP Interfaces. **MPLS Instance Down Reason**. 5620 SAM does not support Down Reason for a MPLS Instance that is operationally down. **Transport Tunnel Unstable Operating Flag**. 5620 SAM does not support the Transport Tunnel Unstable operating flag on Service Tunnels. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup. **OAM Forwarding Class Specification**. 5620 SAM does not support forwarding class specification for mac-ping, mac-trace and cpe-ping. **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support “port speed not compatible”, “port duplex not compatible” and “port ingress rate not compatible” alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R5 through R7)
	MCS Extension to Maintain MVR State. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 156: 7450 ESS 5.0 R4

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R4)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 5.0 R5 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R4)
	(MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R4)
	Increased Description Field Lengths. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **Class-based Forwarding over RSVP LSPs**. 5620 SAM does not support Class-based Forwarding over RSVP LSPs. **Manual Bypass Tunnels**. 5620 SAM does not support Manual Bypass Tunnels. **Port-based Egress Scheduling Policies**. 5620 SAM does not support Port-based Egress Scheduling Policies. **LAG Hold Up Timer**. 5620 SAM does not support configuration of Hold Up Timer on LAG Primary Member. **Unnumbered IP Interfaces on IES**. 5620 SAM does not support Unnumbered IP Interfaces for IES services. **QinQ Encapsulated SAP Support for Efficient EMR**. 5620 SAM does not support QinQ Encapsulation on SAPs with Efficient Egress Multicast Replication (EMR). **Multicast CAC Extended Support for LAGs**. 5620 SAM does not support Multicast CAC extended support for LAGs. **MCS Extension to Maintain MVR State**. 5620 SAM does not support the Multi-Chassis Synchronization (MCS) extension to maintain the state for Multicast VPLS Registration (MVR). **Network Queue Policy CIR/PIR Adaptation Rules**. 5620 SAM does not support configuration of CIR/PIR Adaptation Rules on Network Queue Policies. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R4)
	ports. **RADIUS Template User Account.** 5620 SAM does not support RADIUS Template User Account configuration.

Table 157: 7450 ESS 5.0 R3

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R3)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports.
5620 SAM 5.0 R5	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R3)
through R11	limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports.
5620 SAM 5.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R3)
	OAM Test Octet Size Range Change. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **Interface Delay Timers**. 5620 SAM does not support delay timer configuration for router interfaces. **Increased Description Field Lengths**. 5620 SAM does not support increased description field lengths for Ports, LAGs, router interfaces and IES interfaces. **LACP Tunneling**. 5620 SAM does not support LACP Tunnel configuration for ethernet ports. **RADIUS Template User Account**. 5620 SAM does not support RADIUS Template User Account configuration.

Table 158: 7450 ESS 5.0 R1 through R2

5620 SAM Release	Compatibility Statement (7450 ESS 5.0 R1 through R2)
5620 SAM 8.0 R1 and above	Network element not supported.
5620 SAM 7.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 5.0 R3 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 5.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **(PTS 518181) High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs.

Alcatel-Lucent 7450 Ethernet Service Switch Release 4.0

Table 159: 7450 ESS 4.0 R21

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R21)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R21)
	Route Policy Statement and Entry Preference. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R2 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R21)
	speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R21)
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value ‘0’ within a managed-vlan-list range.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R21)
	IES Interface IP MTU. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.

Table 160: 7450 ESS 4.0 R14 through R20

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R14 through R20)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R14 through R20)
	MVPLS Enhancements for Managed VLAN lists. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R2 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R14 through R20)
	VRRP Standby Forwarding. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R14 through R20)
	IES Interface IP MTU. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.

Table 161: 7450 ESS 4.0 R7 through R13

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R7 through R13)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R7 through R13)
	services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R2 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R7 through R13)
	vlan-list range.
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **High-Bandwidth IP Multicast MDA**. 5620 SAM does not support high-bandwidth IP multicast configuration for MDAs. **TACACS+ Template User Account**. 5620 SAM does not support TACACS+ template user account configuration. **Route Policy Statement and Entry Preference**. 5620 SAM does not support configuration of the preference parameter for route policy statements or route policy entries. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R7 through R13)
	software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.

Table 162: 7450 ESS 4.0 R5 through R6

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R5 through R6)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R5 through R6)
	vlan-list range.
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information. **MVPLS Enhancements for Managed VLAN lists**. 5620 SAM does not support configuration of the default-sap parameter for managed-vlan-lists under M-VPLS services. In addition, 5620 SAM does not support the value '0' within a managed-vlan-list range.

Table 163: 7450 ESS 4.0 R4

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R4)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R4)
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding. **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information.

Table 164: 7450 ESS 4.0 R3

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R3)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 4.0 R2 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **(PTS 505742) ISSU and "Configuration File Change" Synchronization Mode**. Performing an In-Service Software Update (ISSU) with Redundant Synchronization Mode set to "Configuration File Change" will not perform a CPM switchover after software download completes. The user must change the Redundant Synchronization Mode to "Boot Environment Change" in order to successfully complete an In-Service Software Update. **VRRP Standby Forwarding**. 5620 SAM does not support VRRP Standby Forwarding.

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R3)
	(PTS 505396) Dynamic Updates For Residential Subscribers. Subscriber Management MIB improvements prevent 5620 SAM from properly handing changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information.

Table 165: 7450 ESS 4.0 R1 through R2

5620 SAM Release	Compatibility Statement (7450 ESS 4.0 R1 through R2)
5620 SAM 7.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 6.1 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 6.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 4.0 R3 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39).
5620 SAM 4.0 R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **(PTS 505396) Dynamic Updates For Residential Subscribers.** Subscriber Management MIB improvements prevent 5620 SAM from properly handling changes to residential subscribers when initiated from the network element. Full resynchronization of the network element is required to capture current Residential Subscriber information.
5620 SAM 4.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM Test Octet Size Range Change**. 5620 SAM does not support the increased OAM test octet size range values for MFIB ping (values 1-39). **(PTS 500630) Static Routes With Un-numbered Interfaces**. 5620 SAM does not support the creation of static routes with un-numbered interfaces.

Alcatel-Lucent 7450 Ethernet Service Switch Release 3.0

Table 166: 7450 ESS 3.0 R19 through R20

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R19 through R20)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R6 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 5.0 R2 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement Alarms**. 5620 SAM does not support "port speed not compatible", "port duplex not compatible" and "port ingress rate not compatible" alarms for GigE Daughtercard Field Replacements of a Rev. B Daughtercard with a non-Rev. B Daughtercard. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R19 through R20)
	Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces.

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R19 through R20)
	(PTS 504594) Accounting Policies. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timers.** New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 495339) Support for Additional OSPF Timers.** New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added within 5620 SAM for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance.

Table 167: 7450 ESS 3.0 R15 through R18

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R15 through R18)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R2 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 5.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R15 through R18)
	Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timers.** New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R15 through R18)
	range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **GigE Daughtercard Field Replacement**. 5620 SAM does not support GigE Daughtercard Field Replacements. **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 495339) Support for Additional OSPF Timers.** New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added within 5620 SAM for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance.

Table 168: 7450 ESS 3.0 R12 through R14

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R12 through R14)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R12 through R14)
	addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timers**. New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IES Interface IP MTU**. 5620 SAM does not support IP MTU configuration on IES Interfaces. **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 495339) Support for Additional OSPF Timers**. New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added within 5620 SAM for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance.

Table 169: 7450 ESS 3.0 R11

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R11)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion.

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R11)
	(PTS 495339) Support for Additional OSPF Timers. New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 504594) Accounting Policies**. Accounting policies must be shut down before deletion. **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 495339) Support for Additional OSPF Timers.** New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added within 5620 SAM for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance.

Table 170: 7450 ESS 3.0 R5 through R10

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R5 through R10)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait.
5620 SAM 3.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timer Options.** New OSPF timers – lsa-arrival, lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 495339) Support for Additional OSPF Timers**. New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. In addition, 5620 SAM does not allow the user to configure values greater than 60000 for spf-second-wait and spf-initial-wait. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R5 through R10)
	configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance. **(PTS 493260) MPLS LSP Re-signal Timer**. 5620 SAM should not support the value range [1-29] for MPLS re-signal timer. The valid range for this field is [0, 30…10080].
5620 SAM 3.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 495339) Support for Additional OSPF Timers**. New OSPF timers – lsa-arrival and lsa-general and spf-max-wait – cannot be configured via 5620 SAM. **(PTS 493285) OSPF Timer Enhancements.** Limited support has been added within 5620 SAM for the new OSPF routing instance spf-wait command: spf-max-wait is not supported, spf-initial-wait is equivalent to spacing and spf-second-wait is equivalent to holdtime. For spf-second-wait and spf-initial-wait, 5620 SAM will only allow the user to configure a value between [0 .. 60000] – the valid range on the router is [1..100000]. Attempting to configure a value outside the 5620 SAM accepted range will prevent the user from altering other parameters of the OSPF routing instance.

Table 171: 7450 ESS 3.0 R3 through R4

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R3 through R4)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R3 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **LAG on Access Q-in-Q Encapsulation.** 5620 SAM does not support the LAG on Access Q-in-Q feature. **(PTS 489144) MPLS LSP Re-signal Timer.** 5620 SAM supports the range [0, 30-10080] for MPLS re-signal timer. 5620 SAM does not support the values [1-29] whereas the node supports the complete value range of [0-10080] for this attribute.

Table 172: 7450 ESS 3.0 R1 through R2

5620 SAM Release	Compatibility Statement (7450 ESS 3.0 R1 through R2)
5620 SAM 6.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 5.0 R1 through R11	Network element supported as per 5620 SAM Release Description.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description.

Alcatel-Lucent 7450 Ethernet Service Switch Release 2.0

5620 SAM Release	Compatibility Statement (7450 ESS 2.0 R10)
5620 SAM 5.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R5 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R4	Network element not supported: **(PTS 495704)** Discovery Management. 5620 SAM does not support management of this router version.
5620 SAM 2.1 R1 through R5	Network element not supported: **(PTS 495704)** Discovery Management. 5620 SAM does not support management of this router version.
5620 SAM 2.0 R5 through R6	Network element not supported: **(PTS 495704)** Discovery Management. 5620 SAM does not support management of this router version.

Table 174: 7450 ESS 2.0 R5 through R9

5620 SAM Release	Compatibility Statement (7450 ESS 2.0 R5 through R9)
5620 SAM 5.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.1 R1 through R5	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.0 R5 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 2.0 Support.** 5620 SAM will discover and reconcile 7450 ESS 2.0 hardware but only 7450 ESS 1.0 level functionality can exist or be configured on the network element.

Table 175: 7450 ESS 2.0 R4 [2]

5620 SAM Release	Compatibility Statement (7450 ESS 2.0 R4)
5620 SAM 5.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.1 R1 through R5	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.0 R5 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 2.0 Support.** 5620 SAM will discover and reconcile 7450 ESS 2.0 hardware but only 7450 ESS 1.0 level functionality can exist or be configured on the network element.

[6] Note: The 7450 Ethernet Service Switch Release 2.0 R3 was never released to the field

Table 176: 7450 ESS 2.0 R2

5620 SAM Release	Compatibility Statement (7450 ESS 2.0 R2)
5620 SAM 5.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.1 R1 through R5	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.0 R5 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 2.0 Support.** 5620 SAM will discover and reconcile 7450 ESS 2.0 hardware but only 7450 ESS 1.0 level functionality can exist or be configured on the network element.

Table 177: 7450 ESS 2.0 R1

5620 SAM Release	Compatibility Statement (7450 ESS 2.0 R1)
5620 SAM 5.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 4.0 R1 through R12	Network element supported as per 5620 SAM Release Description with the following limitations: (Router Enhancement) **VPLS Split Horizon Groups**. 5620 SAM does not resynchronize VPLS split horizon group information. The service can be provisioned using 5620 SAM, but the information will not be resynchronized.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description with the following limitations: (Router Enhancement) **VPLS Split Horizon Groups**. 5620 SAM does not resynchronize VPLS split horizon group information. The service can be provisioned using 5620 SAM, but the information will not be resynchronized.
5620 SAM 2.1 R1 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: (Router Enhancement) **VPLS Split Horizon Groups**. 5620 SAM does not resynchronize VPLS split horizon group information. The service can be provisioned using 5620 SAM, but the information will not be resynchronized.
5620 SAM 2.0 R5 through R6	Network element supported as per 5620 SAM Release Description with the following limitations: **7450 2.0 Support.** 5620 SAM will discover and reconcile 7450 ESS 2.0 hardware but only 7450 ESS 1.0 level functionality can exist or be configured on the network element.

Alcatel-Lucent 7450 Ethernet Service Switch Release 1.0

Table 178: 7450 ESS 1.0 R1 through R6

5620 SAM Release	Compatibility Statement (7450 ESS 1.0 R1 through R6)
5620 SAM 4.0 R1 and above	Network element not supported. 5620 SAM does not support management of this router version.
5620 SAM 3.0 R1 through R10	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.1 R1 through R5	Network element supported as per 5620 SAM Release Description.
5620 SAM 2.0 R5 through R6	Network element supported as per 5620 SAM Release Description.

3.3 Alcatel-Lucent 7710 Service Router

Alcatel-Lucent 7710 Service Router Release 9.0

Table 179: 7710 SR 9.0 R3

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R3)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **DHCP Filter Capability.** 5620 SAM does not support dhcp filters. [609989] **Credit Control IPv6 Filter.** 5620 SAM does not support new range of icmp-code and icmp-type. [609984] **Percentage Based BW in QoS policies.** 5620 SAM does not support Percentage Based Bandwidth in QoS Policies. [609976] **VID Filters.** 5620 SAM does not support VLAN in MAC filter inc. bitmask for ACL and QoS policies . [609969] **Multi-segment PW Routing.** 5620 SAM does not support Multi-Segment Pseudowire Routing (Dynamic MS-Pws). [609964] **Extentions to ATM/ETHERNET Last-mile Aware QoS for BNG**. 5620 SAM does not support Extentions to ATM/ETHERNET Last-mile Aware QoS for Broadband Network Gateway. [609997] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R3)
	Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544]

Table 180: 7710 SR 9.0 R1 through R2

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R1 through R2)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R1 through R2)
	switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R1 through R2)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 9.0 R1 through R2)
	such as start and completion of a recover action after system startup.

Alcatel-Lucent 7710 Service Router Release 8.0

Table 181: 7710 SR 8.0 R10[7]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP LCP Protocol Reject.** 5620 SAM does not support provisioning PPP policy to "reject-disabled-ncp" if ipv6 was not configured". [610833] **Credit Control IPv6 Filter.** 5620 SAM does not support new range of icmp-code and icmp-type. [610781] **CBS Pool Alarm Thresholds.** 5620 SAM does not support provisioning or monitoring of pool alarm thresholds for CBS. [610784] **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

[7] Note: 7710 SR 8.0 R8 was never released to the field.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	switchover for multilink bundles. [580518] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]
5620 SAM 8.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	[581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	IS-IS Timer Enhancements. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	DHCP Server Failover Support. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	VPLS L2 Access Interface Ring-Node Support. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	LDP FEC Statistics. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	QinQ Untagged Frames ".0". 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services).

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	LDP FEC to BGP Label Route Stitching. 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **LI Activation Enhancements.** 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change. **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R10)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 182: 7710 SR 8.0 R9[8]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

[8] Note: 7710 SR 8.0 R8 was never released to the field.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Additional DNS Ping Error Results. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	MPLS Static LSP Fast Retry Timer. 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	GARP for Outer VLAN Access Interfaces. 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm.** 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Multicast over PPPoE Sessions. 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Static Route LDP Synchronization. 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [607054] **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	response. [607056] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [607059] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	LI Activation Enhancements. 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change. **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R9)
	the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 183: 7710 SR 8.0 R7

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	MPLS Static LSP Fast Retry Timer. 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	VPN Leaked Route Counts. 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	ARP on DHCP Response Packets. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
5620 SAM 8.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	DHCP Server Failover Support. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	DIAMETER Credit Control On-line Charging. 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	MPLS Static LSP Fast Retry Timer. 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	MPLS/RSVP Local Node Maintenance Required Error. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Confederation/Confederation Member with the same AS number.** 5620 SAM does not support creation of the Confederation and Confederation Member with same Autonomous System number on a SR node running software release 8.0, R7 or later. [605975] **Configurable Filter Lock for LI**. 5620 SAM does not support configurable filter lock for Lawful Intercept (LI). [601635] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	IPv6 Support on IPipe. 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	Queue Parent Weight Override. 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **LI Activation Enhancements.** 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change. **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	IGMP Tunnel Interface Administrative State. 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R7)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 184: 7710 SR 8.0 R6

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	PIM ECMP Optional Threshold Usage. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	GARP for Outer VLAN Access Interfaces. 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 598309) Router Reboot Caused By Service Endpoint Creation**. Creation of a service endpoint using 5620 SAM will result in a router reboot. A fix for this issue will be available as of 5620 SAM 8.0 R6 or 7750/7450/7710 Release 8.0 R7. [598309] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	MPLS/RSVP Local Node Maintenance Required Error. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 598309) Router Reboot Caused By Service Endpoint Creation**. Creation of a service endpoint using 5620 SAM will result in a router reboot. A fix for this issue will be available as of 5620 SAM 8.0 R6 or 7750/7450/7710 Release 8.0 R7. [598309] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	SC-APS Support for MLPPP on Network Ports. 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	Multicast Over LDP P2MP LSP. 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	[581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 598309) Router Reboot Caused By Service Endpoint Creation**. Creation of a service endpoint using 5620 SAM will result in a router reboot. A fix for this issue will be available as of 5620 SAM 8.0 R6 or 7750/7450/7710 Release 8.0 R7. [598309] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [598840] **VPLS L2 Access Interface Ring-Node Support**. 5620 SAM does not support ring-node for VPLS Service L2 Access Interfaces. [598848] **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	LAG LACP System-ID Configuration. 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **LI Activation Enhancements.** 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change. **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	Admin State Rules for Bundle Protection Group. 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R6)
	IGMP Snooping Maximum Number of Sources. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 185: 7710 SR 8.0 R5

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	Ethernet Queue Groups. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	802.3ah OAM Loop Cleared Notification. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531]

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	Admin State Rules for Bundle Protection Group. 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0)

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer).

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received). 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IPv6 Support on IPipe.** 5620 SAM does not support IPv6 for IPipes. **RSVP-TE P2MP I-PMSI.** 5620 SAM does not support RSVP-TE P2MP I-PMSI. **SC-APS Support for MLPPP on Network Ports.** 5620 SAM does not support MLPPP on Network Ports for SC-APS. **Ethernet CFM Frame Rate Limiting.** 5620 SAM does not support Ethernet CFM Frame Rate Limiting. **IPv6 Address /127 Netmask Support.** 5620 SAM does not support /127 netmasks for IPv6 addresses. **QinQ Untagged Frames ".0".** 5620 SAM does not support QinQ Untagged Frames (.0) for L2 and L3 Access Interfaces. **GARP for Outer VLAN Access Interfaces.** 5620 SAM does not GARP after SRRP switchover on outer VLAN Access Interfaces. [576161] **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **LI Activation Enhancements.** 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	802.1ag MA Association Naming for Y1731 Eth-OAM MEGs. 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	OAM SAA IMCP Ping Forwaring Class. 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R5)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 186: 7710 SR 8.0 R4

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592549) IPv6 Standalone PPP-SLAAC or PPP-DHCP6 Mid-Session Change.** A mid-session change on an IPv6 PPP-SLAAC or PPP-DHCP6 ESM subscriber host will result in a deployment failure if the host does not also have IPv4 addressing configured (v4/v6 Dual-stack). **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	802.3ah OAM Loop Cleared Notification. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592549) IPv6 Standalone PPP-SLAAC or PPP-DHCP6 Mid-Session Change.** A mid-session change on an IPv6 PPP-SLAAC or PPP-DHCP6 ESM subscriber host will result in a deployment failure if the host does not also have IPv4 addressing configured (v4/v6 Dual-stack). **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592549) IPv6 Standalone PPP-SLAAC or PPP-DHCP6 Mid-Session Change.** A mid-session change on an IPv6 PPP-SLAAC or PPP-DHCP6 ESM subscriber host will result in a deployment failure if the host does not also have IPv4 addressing configured (v4/v6 Dual-stack). **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time. **CoA-Only RADIUS Server.** 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	LAG LACP System-ID Configuration. 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 592549) IPv6 Standalone PPP-SLAAC or PPP-DHCP6 Mid-Session Change.** A mid-session change on an IPv6 PPP-SLAAC or PPP-DHCP6 ESM subscriber host will result in a deployment failure if the host does not also have IPv4 addressing configured (v4/v6 Dual-stack). **(PTS 587339) IGMP Tunnel Interface Deployment Failure.** 5620 SAM does not support creation of IGMP Tunnel Interfaces of type RSVP. A deployment failure will occur upon attempted creation. **Full SSM/ESMC Support.** 5620 SAM does not support full SSM/ESMC capability for clock source quality level received via SSM of SDH/SONET/BITS ports or ESMC of

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	synchronous Ethernet ports for system timing reference selection. **Uni-Directional APS Service Parity for SONET/SDH Channelized and Non-Channelized Interfaces.** 5620 SAM does not support uni-directional APS service parity for SONET/SDH channelized and non-channelized interfaces for MDAs/CMAs that previously only supported bi-directional switching mode APS. **DIAMETER Credit Control On-line Charging.** 5620 SAM does not support on-line charging wuth DIAMETER Credit Control. **Multicast over PPPoE Sessions.** 5620 SAM does not support multicast of PPPoE sessions. **Remove/Add/Modify Domain Names in RADIUS Authentication.** 5620 SAM does not support add/remove/replace for strings used as domain names in PAP/CHAP authentication. **Multiple RADIUS Authentication Based On Domain Name.** 5620 SAM does not support multiple RADIUS Authentication based on Domain Name (Pre-Authentication in LUDB). **IPoE User Name Option 61/60.** 5620 SAM does not support RADIUS User Name Format: DHCP Option 61/60. **ESM IPv6 Local User Database (LUDB) for IPoE.** 5620 SAM does not support ESM IPv6 Local User Database (LUDB) for IPoE. **ATM Aware QoS for Broadband Network Gateway.** 5620 SAM does not support ATM/ethernet last-mile aware QoS for broadband network gateway. **Queue Parent Weight Override.** 5620 SAM does not support queue parent weight override. **QoS Burst Management.** 5620 SAM does not support QoS Burst Management. **Multicast Over LDP P2MP LSP.** 5620 SAM does not support multicast over LDP P2MP LSP. **LSP Automatic Bandwidth Adjustment.** 5620 SAM does not support LSP Automatic Bandwidth Adjustment. **PBB Support for RFC 3107.** 5620 SAM does not support PBB for RFC 3107 (BGP LSP for PBB-VPLS Services). **LDP FEC to BGP Label Route Stitching.** 5620 SAM does not support LDP FEC to BGP label route stitching. **SDP-Configurable Tunnel Destination Address.** 5620 SAM does not support SDP-configurable tunnel destination address. **HSDPA Offload Fallback Over ATM .** 5620 SAM does not support HSDPA offload fallback over ATM. **RADIUS Authentication Policy Down Time.** 5620 SAM does not support RADIUS authentication policy down time.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	CoA-Only RADIUS Server. 5620 SAM does not support CoA-only RADIUS server. **TACACS+ 128-Character Secret Key.** 5620 SAM does not support 128 characters for the TACACS+ secret key. **LAG LACP System-ID Configuration.** 5620 SAM does not support configuration of the LACP System-ID for LAGs. **BGP Prefix Limit Threshold Percentage and Log-only.** 5620 SAM does not support configuration threshold limit percentage and log-only parameters for BGP peers. **IS-IS Default IPv4 and IPv6 Metric Values.** 5620 SAM does not support IPv4 and IPv6 default metrics for IS-IS interfaces. **RFC 4379 Timestamp for OAM/SAA.** 5620 SAM does not support RFC 4379 Timestamps for OAM. [582495] **LI Activation Enhancements.** 5620 SAM does not support LI Activation Enhancements. **LI for LAC Sessions.** 5620 SAM does not support LI for LAC Sessions. **SLA Override without SLA-Profile Change.** 5620 SAM does not support SLA override without SLA-Profile change. **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R4)
	ARP on DHCP Response Packets. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 187: 7710 SR 8.0 R3

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	PIM ECMP Optional Threshold Usage. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **802.1ag MA Association Naming for Y1731 Eth-OAM MEGs.** 5620 SAM does not support 802.1ag MA Association name formats of type integer, string, vid, vpn-id for Y1731 Eth-OAM MEGs. [587671] **IGMP Tunnel Interface Administrative State.** 5620 SAM does not support administrative state for IGMP Tunnel Interfaces. [587673] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [587675] **VPN Leaked Route Counts.** 5620 SAM does not support VPN Leaked Route Counts. [587676] **Tunnel Interface Description.** 5620 SAM does not support description for Tunnel Interfaces. [587677] **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R3)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 188: 7710 SR 8.0 R1 through R2

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
	such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
	packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1	Network element supported as per 5620 SAM Release Description with the following

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
through R4	limitations: **Uni-directional APS Support.** 5620 SAM does not support Uni-directional APS. [581463] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics.

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
	Multicast over RSVP, P2MP, and LSP. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 8.0 R1 through R2)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Alcatel-Lucent 7710 Service Router Release 7.0

Table 189: 7710 SR 7.0 R19

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	[572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Ethernet Queue Groups. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	IOM Card FIB and FIB Next-Hop Statistics. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	MPLS/RSVP Local Node Maintenance Required Error. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Telnet/SSH TTL Security Check. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Ethernet Queue Groups. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	IOM Card FIB and FIB Next-Hop Statistics. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	[588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	LDP Shortcut TTL Propagation Disabling. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set"

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Additional DNS Ping Error Results**. 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922] **MPLS Exception Messages Rate Limiting for VPRN**. 5620 SAM does not support global rate limiting of MPLS exception messagesfor VPRN Services. [608929] **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	PBB MAC Name Support. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	Multicast VPN Evolution with BGP Control Plane. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R19)
	DHCP Server Failover Support. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 190: 7710 SR 7.0 R17 through R18

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	OAM LSP Ping 'Packet Size Too Big' Response Status. 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	[572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Null Endpoint Discriminator ID for MLPPP. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7	Network element supported as per 5620 SAM Release Description with the following limitations:

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
through R8	**IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	[572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	System Memory Usage Statistics in Kilobytes. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Static Route LDP Synchronization. 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Manufacturing Part Number. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Telnet/SSH TTL Security Check. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	MLPS / RSVP (Fast Retry Timer). 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set"

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IS-IS Timer Enhancements**. 5620 SAM does not support the increased range values of [1..9] for SPF Second Wait under an IS-IS Routing Instance. [603707] **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	PIM SSM Default Range Disable. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	G.8031 Protected Ethernet Tunnels. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap)**. 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R17 through R18)
	IGMP Snooping Maximum Number of Sources. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 191: 7710 SR 7.0 R14 through R16

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Provider Bridge Group Address (802.1ad) MSTP Support. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	MPLS Static LSP Fast Retry Timer. 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	System Memory Usage Statistics in Kilobytes. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	ICMP-VSE. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Power Supply Type "Default". 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	ICMP-VSE. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type “Default”**. 5620 SAM does not support the “default” type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Custom Buffer Management for ATM MDA Ports. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **IMPM Round Robin Inactive Records Path Redistribution**. 5620 SAM does not support Round Robin Inactive Records path redistribution for Ingress Multicast Path Management. [597216] **Telnet/SSH TTL Security Check**. 5620 SAM does not support TTL Security check for

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Telnet and SSH. [597217] **System Memory Usage Statistics in Kilobytes**. 5620 SAM does not support kilobyte measured values of system memory usage/allocation/available. [597218] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	LAG Support for HS-MDA. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R14 through R16)
	untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 192: 7710 SR 7.0 R13

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Time and Volume Based Accounting. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Static Route LDP Synchronization. 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type “Default”**. 5620 SAM does not support the “default” type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping ‘Packet Size Too Big’ Response Status.** 5620 SAM does not support the “Packet Size Too Big” reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	New PVST Modes for BPDU Translation. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Time and Volume Based Accounting. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	(PTS 588751) ESM Local User Database. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	PIM Instant Prune Echo. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type “Default”**. 5620 SAM does not support the “default” type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping ‘Packet Size Too Big’ Response Status.** 5620 SAM does not support the “Packet Size Too Big” reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	BGP Remove Private Limited. 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593083] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593086] **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	1-Port GigE CMA-XP. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	IGMP Host-Tracking. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R13)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm.** 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 193: 7710 SR 7.0 R12

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received). 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	IOM Card FIB and FIB Next-Hop Statistics. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	PIM ECMP Optional Threshold Usage. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	PIM SSM Default Range Disable. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received). 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **(PTS 588751) ESM Local User Database**. 5620 SAM does not support Local User Database for Enhanced Subscriber Management (Residential Subscriber). This issue should be resolved as of the 7750 / 7450 / 7710 7.0.R13 maintenance release. [588751] **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	OAM SAA IMCP Ping Forwaring Class. 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R12)
	and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 194: 7710 SR 7.0 R10 through R11

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received). 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	LDP FEC Statistics. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	ICMP-VSE. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping ‘Packet Size Too Big’ Response Status.** 5620 SAM does not support the “Packet Size Too Big” reponse status for OAM LSP Ping Tests. [587682] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes ‘auto-rw’ and ‘pvst-rw’ BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the ‘limited’ option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	System Timing Reference Selection State. 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	LDP Shortcut TTL Propagation Disabling. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	MPLS/RSVP Local Node Maintenance Required Error. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	PPP Initial delay. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	PIM ECMP Optional Threshold Usage. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **OAM LSP Ping 'Packet Size Too Big' Response Status.** 5620 SAM does not support the "Packet Size Too Big" reponse status for OAM LSP Ping Tests. [587682] **(PTS 587683) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [587683] **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R10 through R11)
	Untagged RNCV Support for MC-Ring QinQ SAP. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 195: 7710 SR 7.0 R8 through R9

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	ARP on DHCP Response Packets. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	PIM Group Administrative Bandwidth. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	IOM Card FIB and FIB Next-Hop Statistics. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	BGP-AD for LDP-based VPLS Cisco Interop. 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **APS Multilink Bundle Stateless Switchover**. 5620 SAM does not support stateless APS switchover for multilink bundles. [580518] **New PVST Modes for BPDU Translation**. 5620 SAM does not support new PVST modes 'auto-rw' and 'pvst-rw' BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. [580519] **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports.** 5620 SAM does not support custom

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	Multicast VPN Evolution with BGP Control Plane. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R8 through R9)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 196: 7710 SR 7.0 R7

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	Policies for Subscriber Management. **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	PIM SSM Default Range Disable. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	Null Endpoint Discriminator ID for MLPPP. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	OAM SAA IMCP Ping Forwaring Class. 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	ARP on DHCP Response Packets. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **BGP Remove Private Limited.** 5620 SAM does not support the 'limited' option for the remove-private parameter on the Base and VPRN BGP routing instances, groups and neighbors. [576529] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [576531] **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address. 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	PIM Group Administrative Bandwidth. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R7)
	which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 197: 7710 SR 7.0 R6

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	Multicast Info Policies Support. 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	SHCV Timeout and Retries. 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	ICMP-VSE. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547]

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	ICMP-VSE. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	[572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **BGP-AD for LDP-based VPLS Cisco Interop.** 5620 SAM does not support Cisco Interop on BGP Neighbors and LDP Peers for use in BGP-AD for LDP-based VPLS. [572543] **SHCV Timeout and Retries.** 5620 SAM does not support Subscriber Host Connectivity Verification (SHCV) Timeout and Retry configuration for VPLS service sites and L2 Access Interfaces, and IES / VPRN L3 Access Interfaces and Group Interfaces. [572544] **MPLS Static LSP Fast Retry Timer.** 5620 SAM does not support Fast Retry Timer for Static LSPs. [572545] **Static Route LDP Synchronization.** 5620 SAM does not support LDP Synchronization

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	for Static Routes. [572547] **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap)**. 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R6)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 198: 7710 SR 7.0 R5

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG’s for HS-MDA’s LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	Routing Policy Statement Entry (from Criteria). 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	SRRP System IP Not Set Alarm. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R3 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	tmnxSyncFailureReason. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received). 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **LDP Shortcut TTL Propagation Disabling**. 5620 SAM does not support the option for disabling TTL propagation for transit packets in an LDP shortcut. **Custom Buffer Management for ATM MDA Ports**. 5620 SAM does not support custom buffer management for ATM MDA ports which allows for configuration of the buffer pool size and queue backpressure threshold on ATM ports. **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **PIM Instant Prune Echo**. 5620 SAM does not support PIM Instant Prune Echo for router and VPRN PIM Interfaces. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **PBB MAC Name Support**. 5620 SAM does not support PBB MAC Name. **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **Long Channel Descriptions**. 5620 SAM does not support long descriptions (160 characters) for SONET/SDH Paths, TDM DS3, E3 and DS1 Channel Groups. A maximum of 80 character descriptions are currently supported. **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	LDP FEC Statistics. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap)**. 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R5)
	CES L2 Interface Jitter Buffer Current Packet Depth. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 199: 7710 SR 7.0 R4

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	DHCP Server Failover Support. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG’s for HS-MDA’s LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of “no-tag” on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	DHCP Server Failover Support. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4	Network element supported as per 5620 SAM Release Description with the following limitations: **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG’s for HS-MDA’s LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **1-Port GigE CMA-XP**. 5620 SAM does not support the 1-Port GigE CMA-XP. **LSR IP Load Balancing**. 5620 SAM does not support LSR IP load balancing. **SLA-Profile Based Egress Remarking**. 5620 SAM does not support 'Egress QoS marking from SAP' for Subscriber Management SLA-Profiles. **eiBGP Load Balancing**. 5620 SAM does not support eiBGP load balancing for VPRN services. **Configurable CFM Thresholds**. 5620 SAM does not support configurable Ethernet CFM Eth-Test and One-Way-Delay thresholds. **G.8031 Protected Ethernet Tunnels**. 5620 SAM does not support G.8031 Protected Ethernet Tunnels. **TCP Authentication Null Key**. 5620 SAM does not support null keys for TCP authentication keychains. **Ethernet Port Down-When-Looped Broadcast Address**. 5620 SAM does not support down-when-looped broadcast address for ethernet ports. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	Time and Volume Based Accounting. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap**). 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R4)
	IOM Card FIB and FIB Next-Hop Statistics. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 200: 7710 SR 7.0 R3

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	RADIUS Disconnect-Request Statistics. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	Multicast over RSVP, P2MP, and LSP. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **H-QOS Adjustments based on Video Viewership**. 5620 SAM does not support H-QOS Adjustments based on Video Viewership. **Ethernet Queue Groups**. 5620 SAM does not support Ethernet Queue Groups. **LAG Support for HS-MDA**. 5620 SAM does not support LAG's for HS-MDA ports. **LDP FEC Statistics**. 5620 SAM does not support LAG's for HS-MDA's LDP FEC Statistics. **Multicast over RSVP, P2MP, and LSP**. 5620 SAM does not support Multicast over RSVP, P2MP, and LSP. **LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP**. 5620 SAM does not support LSP-PING and LSP-TRACE for P2MP, RSVP, and LSP. **IPv6 PIM ASM**. 5620 SAM does not support IPv6 PIM ASM. **Multicast VPN Evolution with BGP Control Plane**. 5620 SAM does not support Multicast VPN Evolution with BGP Control Plane. **LDP over RSVP without Area-Boundary for IS-IS**. 5620 SAM does not support LDP over RSVP without Area-Boundary for IS-IS. **Time and Volume Based Accounting**. 5620 SAM does not support Time and Volume Based Accounting. **Routing Policy Statement Entry (from Criteria).** 5620 SAM does not support a value of "no-tag" on the Routing Policy Statement Entry (from Criteria). **MLPS / RSVP (Fast Retry Timer).** 5620 SAM does not support MLPS / RSVP (Fast Retry Timer). **OAM (Dying Gasp trap)**. 5620 SAM does not support "Dying gasp Trap" for OAM. **MVPN BGP Trap (Inconsistent Auto-Discovery Route is Received).** 5620 SAM does not support 'vRtrPimNgInvalidMdtDefJoin' trap notifications on MVPN BGP. **IGMP Host-Tracking**. 5620 SAM does not support IGMP Host Tracking on IES and VPRN services, including subscriber interfaces. It is also not supported on VPLS service. **ARP on DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set"

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R3)
	Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms.** 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 201: 7710 SR 7.0 R1 through R2

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R1 through R2)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R1 through R2)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R1 through R2)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R4 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP.

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R1 through R2)
	Subscriber Management Persistence Event Report Alarms. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Info Policies Support.** 5620 SAM provides read-only support of Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad).

5620 SAM Release	Compatibility Statement (7710 SR 7.0 R1 through R2)
	MC-Ring Debounce Timer. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Alcatel-Lucent 7710 Service Router Release 6.1

Table 202: 7710 SR 6.1 R17 through R19

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089]

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Manufacturing Part Number. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R1 through R4	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	PPP Initial delay. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Multicast Info Policies Support. 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R7 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367]

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Increased Channel Description Lengths. 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Multicast Path Management Channel Support. 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R6	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087]

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Power Supply Type "Default". 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
5620 SAM 7.0 R4 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **OAM SAA IMCP Ping Forwaring Class.** 5620 SAM does not support the configuration of forwarding class. [568282] **ICMP-VSE**. 5620 SAM does not support the configuration of ICMP VSE (Vendor specific extension). [568282] **tmnxSyncFailureReason**. 5620 SAM does not support tmnxSyncFailureReason indicating the reason for CPM configuration and boot-env synchronization failures. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	tmnxCpmCardSyncFileNotPresent Alarm. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 7.0 R1 through R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R6 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Card PChip Cam Event. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	for 7710 SR VPRN services and routing instances. **(PTS 549206) Muti-Chassis APS for ATM VLL VC-Type ATM-VPC**. 5620 SAM does not support multi-chassis APS for use with ATM VLLs of vc-type ATM-PVC. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES DS1/E1 Clock State Change Trap**. 5620 SAM does not support 'tmnxDSXClockSyncStateChange' trap notifications for CES DS1/E1 clock state changes when set to adaptive or differential clock recovery. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set"

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R4 through R5	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type "Default"**. 5620 SAM does not support the "default" type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **(PTS 549206) Muti-Chassis APS for ATM VLL VC-Type ATM-VPC**. 5620 SAM does not support multi-chassis APS for use with ATM VLLs of vc-type ATM-PVC. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **PPPoE Policy PPP Authentication Protocol**. 5620 SAM does not support PPP Authentication Protocol (ppp-authentication {pap|chap|pref-chap}) for Subscriber Management PPPoE Policies. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES DS1/E1 Clock State Change Trap**. 5620 SAM does not support ‘tmnxDSXClockSyncStateChange’ trap notifications for CES DS1/E1 clock state changes when set to adaptive or differential clock recovery. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	RSVP Overhead Refresh Reduction Over Bypass Tunnels. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R3	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type “Default”**. 5620 SAM does not support the “default” type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	(PTS 550389) OAM ICMP Trace Test Deployment Failure. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **(PTS 549206) Muti-Chassis APS for ATM VLL VC-Type ATM-VPC**. 5620 SAM does not support multi-chassis APS for use with ATM VLLs of vc-type ATM-PVC. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **PPPoE Policy PPP Authentication Protocol**. 5620 SAM does not support PPP Authentication Protocol (ppp-authentication {pap|chap|pref-chap}) for Subscriber Management PPPoE Policies. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES DS1/E1 Clock State Change Trap**. 5620 SAM does not support ‘tmnxDSXClockSyncStateChange’ trap notifications for CES DS1/E1 clock state changes when set to adaptive or differential clock recovery. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	SNMP Trap Target Replay. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 6.1 R1 through R2	Network element supported as per 5620 SAM Release Description with the following limitations: **Default Accounting Policy Log Interval**. 5620 SAM does not support default interval for accounting policies. [593089] **Manufacturing Part Number**. 5620 SAM does not support the chassis manufacturing part number. [593087] **Power Supply Type “Default”**. 5620 SAM does not support the “default” type for Power Supplies. [593088] **System Timing Reference Selection State.** 5620 SAM does not support the selection state for system timing references. [584367] **(PTS 584368) Obsoleted OAM Test History Tables Parameter.** 5620 SAM cannot create new OAM tests due to the obsoletion of MIB entries for Ping and Traceroute history tables (tmnxOamPingCtlMaxRows, tmnxOamTrCtlMaxRows), a deployment failure will occur. [584368] **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **PIM SSM Default Range Disable**. 5620 SAM does not support SSM Default Range Disable for PIM routing protocol in the base routing instance and VPRN services. [572539] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **(PTS 571173) LSP Ping using 'Any LSP' Target Type with Destination Path Address.** 5620 SAM does not support deployment of LSP Ping tests which have been configured for a 'Target Type' of 'Any LSP' with a non-0.0.0.0 'Destination Path Address' defined. A deployment failure will result upon test deployment. **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **BGP Minimum Route Advertisement**. 5620 SAM does not support the the min route-advertisement value of 1. This restriction is applicable to the BGP routing instance, BGP Peer Group and the BGP Peer on the base routing instance and VPRN services. [559490] **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **(PTS 550389) OAM ICMP Trace Test Deployment Failure**. 5620 SAM does not support OAM ICMP Trace test desployment which results in a deployment failure. **E1 Channel National Bits**. 5620 SAM does not support National Bits for E1 Channels using G.704 or G.704 no-CRC Framing under ASAP daughter cards. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances. **(PTS 549206) Muti-Chassis APS for ATM VLL VC-Type ATM-VPC**. 5620 SAM does not support multi-chassis APS for use with ATM VLLs of vc-type ATM-PVC. **P-chip Memory Parity Error Alarm**. 5620 SAM does not support P-chip memory parity error alarm (tmnxEqCardPChipMemoryEvent) for cards and daughtercards. **Transmit XPL Error, P-chip FCS Error and P-chip Memory Parity Error Occurances**. 5620 SAM does not support the number of occurances and last occurance of Transmit XPL errors, P-chip FCS errors and P-chip memory parity errors for cards and daughtercards. **PIP STP Inside Same MST Region**. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **PPPoE Policy PPP Authentication Protocol**. 5620 SAM does not support PPP Authentication Protocol (ppp-authentication {pap|chap|pref-chap}) for Subscriber Management PPPoE Policies. **MAF MAC Criteria**. 5620 SAM does not support Management Access Filter (MAF) MAC criteria. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the “Local Node Maintenance Required” error sub-code for MPLS/RSVP LSP path and path bindings. **Untagged RNCV Support for MC-Ring QinQ SAP**. 5620 SAM does not support untagged RNCV for MC-Ring on a QinQ SAP. **CES DS1/E1 Clock State Change Trap**. 5620 SAM does not support ‘tmnxDSXClockSyncStateChange’ trap notifications for CES DS1/E1 clock state changes when set to adaptive or differential clock recovery. **CES L2 Interface Jitter Buffer Current Packet Depth**. 5620 SAM does not support display of the jitter buffer current packet depth for a CES L2 Interface. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R17 through R19)
	Disconnect-Request Statistics for Subscriber Management. **IOM Card FIB and FIB Next-Hop Statistics**. 5620 SAM does not support the active and available number of FIB and FIB next-hop entries for an IOM Card. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **(PTS 550484) Subscriber Management SLA Profile Queue Override**. 5620 SAM does not support override of a policed queue used in a Subscriber Management SLA Profile. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the “System IP Not Set” Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.

Table 203: 7710 SR 6.1 R15 through R16

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R15 through R16)
5620 SAM 9.0 R1	Network element supported as per 5620 SAM Release Description with the following limitations: **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management. **Card PChip Cam Event**. 5620 SAM does not support the Card PChip Cam Event trap. **Ethernet Port Hold Timer**. 5620 SAM does not support the increased Ethernet port hold timer range for values [51..900]. [572537] **Admin State Rules for Bundle Protection Group.** 5620 SAM does not support admin state changes for a Bundle Protection Group that does not have a endpoint-discriminator defined. [572549] **PIM Group Administrative Bandwidth**. 5620 SAM does not support display of the PIM Group administrative bandwidth. **PIM ECMP Optional Threshold Usage**. 5620 SAM does not support display of the PIM ECMP optional threshold usage. **LDP Label Withdrawal Delay**. 5620 SAM does not support configuration of LDP Label Withdrawal Delay. **ARP On DHCP Response Packets**. 5620 SAM does not support ARP on DHCP response packets for IES and VPRN L3 Access Interfaces. **MSDP Peer Authentication Key Length**. 5620 SAM does not support the maximum 256 character length for MSDP Peer Authentication Key and is limited to 255 characters. **RADIUS Server Access Algorithm**. 5620 SAM does not support RADIUS server access algorithm which determines the method used (round robin, direct) for RADIUS server access. **Null Endpoint Discriminator ID for MLPPP**. 5620 SAM does not support Null Endpoint Discriminator ID for MLPPP Multilink Bundles. **IGMP Snooping Maximum Number of Sources**. 5620 SAM does not support Maximum Number of Sources for IGMP Snooping on VPLS service L2 Access Interfaces, Mesh SDPs and Spoke SDPs. **Multicast Path Management Channel Support.** 5620 SAM provides read-only support of multicast path management channels for 7710 SR VPRN services and routing instances. **Multicast Info Policies Support.** 5620 SAM does not support Multicast Info Policies for 7710 SR VPRN services and routing instances.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R15 through R16)
	PIP STP Inside Same MST Region. 5620 SAM does not support tlsPipStpInsideRegion which indicates whether the network connected to a PIP (Provider Internal Port) is in the same MST region. **MPLS/RSVP Local Node Maintenance Required Error**. 5620 SAM does not support the "Local Node Maintenance Required" error sub-code for MPLS/RSVP LSP path and path bindings. **RSVP Overhead Refresh Reduction Over Bypass Tunnels**. 5620 SAM does not support RSVP overhead refresh reduction over bypass tunnels. **DHCP Server Failover Support**. 5620 SAM does not support local DHCP server failover using the Multi-Chassis Sync framework. **SNMP Trap Target Replay**. 5620 SAM does not support the replay parameter for a SNMP trap-target. **RADIUS Disconnect-Request Statistics**. 5620 SAM does not support RADIUS Disconnect-Request Statistics for Subscriber Management. **802.3ah OAM Loop Cleared Notification**. 5620 SAM does not support the 802.3ah OAM loop cleared notification indicating when the port is no longer receiving 802.3ah PDUs with a matching source MAC address. **Provider Bridge Group Address (802.1ad) MSTP Support**. 5620 SAM does not support MSTP for Provider Bridge Group Address (802.1ad). **MC-Ring Debounce Timer**. 5620 SAM does not support Debounce Timer for MC-Ring. **tmnxCpmCardSyncFileNotPresent Alarm**. 5620 SAM does not support the tmnxCpmCardSyncFileNotPresent alarm indicating that the redundancy file synchronization failed to locate an optional file. **SRRP System IP Not Set Alarm**. 5620 SAM does not support the "System IP Not Set" Alarm for SRRP. **Subscriber Management Persistence Event Report Alarms**. 5620 SAM does not support the Subscriber Manager Persistence Event Report alarms indicating events such as start and completion of a recover action after system startup.
5620 SAM 8.0 R5 through R8	Network element supported as per 5620 SAM Release Description with the following limitations: **Increased Channel Description Lengths.** 5620 SAM does not support increased description field lengths of [81..160] characters for SONET Paths, TDM DS3, E3 and DS0 Channel Groups. **PPP Initial delay**. 5620 SAM does not support PPP initial delay configuration on PPPoE Policies for Subscriber Management.

5620 SAM Release	Compatibility Statement (7710 SR 6.1 R15 through R16)
