Table 5: 7750 SR 7.0 R13

5620 SAM Release	Compatibility Statement (7750 SR 7.0 R13)
5620 SAM 8.0 R5	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) Manufacturing Part Number. 5620 SAM does not support the chassis manufacturing part number. [593083]</p> <p>(Feature Enhancement) Power Supply Type “Default”. 5620 SAM does not support the “default” type for Power Supplies. [593086]</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations. In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement. Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. [587678]</p> <p>(Feature Enhancement) AA Subscriber Accounting Statistics Data Loss Alarm. 5620 SAM does not support the Application Assurance Subscriber Accounting Statistics Data Loss Alarm. [587679]</p> <p>(Feature Enhancement) OAM LSP Ping ‘Packet Size Too Big’ Response Status. 5620 SAM does not support the “Packet Size Too Big” response status for OAM LSP Ping Tests. 5620 SAM Release	Compatibility Statement (7750 SR 7.0 R12)
5620 SAM 8.0 R5	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations. In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement. Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. 5620 SAM 7.0 R5	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations.</p> <p>In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement.</p>

5620 SAM 7.0 R1 through R3	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations.</p> <p>In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement.</p> <p>Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change.
