5620 SAM Release	Compatibility Statement (7450 ESS 7.0 R13)
5620 SAM 8.0 R5	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) Manufacturing Part Number. 5620 SAM does not support the chassis manufacturing part number. [593083]</p> <p>(Feature Enhancement) Power Supply Type “Default”. 5620 SAM does not support the “default” type for Power Supplies. [593086]</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations.</p> <p>In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement.</p> <p>Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. [572547]</p> <p>(Feature Enhancement) Video ISA MDA. 5620 SAM does not support the Video ISA MDA. If a pre-SAM 7.0R4 release manages a 7750 or 7450 router with configured Video Groups containing ISA-Video group members, then invalid LAG entries will appear in SAM. The LAGs will incorrectly appear in the SAM Equipment tree with LAG IDs greater than 200. Furthermore, if the router has VPLS, IES or VPRN services that have configured video interfaces and associated video interface address(es), then invalid L2/L3 access interfaces and addresses will appear for these services. Attempting to modify or delete these LAGs, access interfaces or addresses via SAM will result in failed deployments.</p>

5620 SAM Release	Compatibility Statement (7450 ESS 7.0 R12)
5620 SAM 8.0 R5	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change. Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations.</p> <p>In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement.</p> <p>Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. 5620 SAM Release	Compatibility Statement (7450 ESS 7.0 R4)
5620 SAM 7.0 R1 through R3	<p>Network element supported with the following limitations:</p> <p>(Feature Enhancement) Video ISA MDA. 5620 SAM does not support the Video ISA MDA. If a pre-SAM 7.0R4 release manages a 7750 or 7450 router with configured Video Groups containing ISA-Video group members, then invalid LAG entries will appear in SAM. The LAGs will incorrectly appear in the SAM Equipment tree with LAG IDs greater than 200. Furthermore, if the router has VPLS, IES or VPRN services that have configured video interfaces and associated video interface address(es), then invalid L2/L3 access interfaces and addresses will appear for these services.
