5620 SAM 9.0 R1 through R2	<p>Network element supported as per 5620 SAM Release Description with the following limitations:</p> <p><b>Additional DNS Ping Error Results.</b> 5620 SAM does not support the additional DNS Ping error results of FORMERR, SERVFAIL, NOTIMP, REFUSED and unexpected response. [608922]</p> <p><b>MPLS Exception Messages Rate Limiting for VPRN.</b> 5620 SAM does not support global rate limiting of MPLS exception messages for VPRN Services. [593086]</p> <p><b>AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change.</b> Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations. In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement. Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. [587678]</p> <p><b>OAM LSP Ping ‘Packet Size Too Big’ Response Status.</b> 5620 SAM does not support the “Packet Size Too Big” response status for OAM LSP Ping Tests. [587682]</p> <p><b>APS Multilink Bundle Stateless Switchover.</b> 5620 SAM does not support stateless APS switchover for multilink bundles. [580518]</p> <p><b>New PVST Modes for BPDU Translation.</b> 5620 SAM does not support new PVST modes ‘auto-rw’ and ‘pvst-rw’ BPDU Translation for VPLS service L2 Access Interfaces and Spoke-SDPs. 	<p><b>AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change.</b> Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations.</p> <p>In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement.</p> <p>Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. [588751]</p> <p><b>AA ESM Subscriber Accounting ESM Subscriber Statistics Behaviour Change.</b> Node Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations. In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement. Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change. [587678]</p>

5620 SAM Release	Compatibility Statement (7750 SR 7.0 R10 through R11)
	<p>Release 7.0R10 introduces a change in behavior affecting Application Assurance ESM Subscriber accounting statistics. This change may affect the integrity of Application Assurance ESM subscriber statistics in some situations. In previous releases, a dynamic subscriber removal (such as a modem release) would delete previous AA subscriber counter values for that accounting interval. In node release 7.0R10, AA statistics will preserve aa-sub record values when an ESM subscriber gets deleted or goes away. This improves record value accuracy for usage metering where subscriber renewal must not affect the metering values, however, the AA accounting record content solution depends on appropriate SAM statistics support for this enhancement. Non AA subscribers, non ESM AA subscribers and AA-sub-study (special study) records are not affected by this change.
